

KS: I can use a fraction wall and my times tables to find equivalent fractions

What fractions can you see

that are equivalent to $\frac{4}{6}$?

Always, sometimes, never.

If a fraction is equivalent to one half, the denominator is double the numerator.

Prove it.

Use the fraction wall to answer true or false to the following statements:

a) One eighth is half of one quarter T/F

b) One sixth is half of one third T/F

c) One third is half of one sixth T/F

d) One tenth is half of one fifth T/F

e) One tenth is double one fifth T/F

Use your times tables to find the equivalent fractions:

1) $\frac{8}{10} = \frac{32}{\text{yellow box}}$

4) Find an equivalent fraction for $\frac{2}{3}$ by using your times tables.

2) $\frac{\text{yellow box}}{9} = \frac{12}{27}$

3) $\frac{7}{12} = \frac{\text{yellow box}}{60}$
